

Communicable Disease Case Information System

Bridging the Gap between Tuberculosis, HIV/AIDS & STD

■ Fully .NET developed Web Application for TB, HIV/AIDS & STD

■ CDCIS provides a combined database for:

- Case Management
- Surveillance
- Contact Management
- Contact Investigation
- Dispensing Medications
- Medication Tracking
- Extensive Reporting Capabilities
- Auto RVCT export to TIMS
- State-Wide Tracking System Patient Information and demographics
- Extensive Security Model

■ Certified by CDC TIMS for export/import of data into TIMS.

■ Pre-set reports provide RVCT and morbidity reports.

■ Track unlimited numbers of contacts per patient with unlimited types of exposures between patient and contact

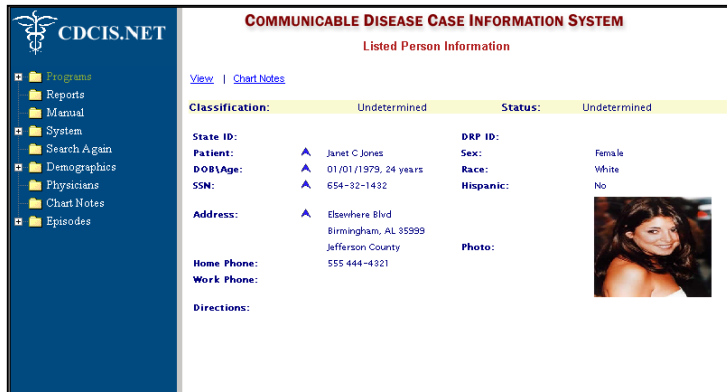

■ List reverse contacts which show who listed a person as a contact

■ Separate a person's multiple cases of TB into individual "episodes"

■ Ability to easily schedule medications and point-click select standard therapies of medicine

■ Integrates with document management & forms processing software

■ The system may be combined with an integrated HIV/AIDS and STD system.

Given		12/4/1973	INH			0	- Import

Visit History

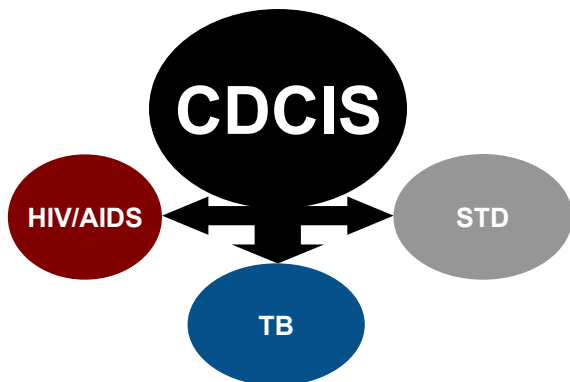

Displays summary data for each visit with a patient for: *all medications, procedures, side effects, dates, performed with a patient*

The Future of CDCIS:

- ❑ CDCIS System is being designed to be a complete TB, AIDS, and STD Tracking System
- ❑ Auto exporting to NEDSS will be provided
- ❑ Additional queries and reports such as ARPE are being added.
- ❑ Enhancing LTBI therapy management
- ❑ Targeted testing management
- ❑ Additional patient management and daily tracking reports
- ❑ DNA Library Integration is in development
- ❑ Complete Scheduling System for tracking patient management events such as: skin test, meds, etc.
